

An attack helicopter is a type of helicopter specifically designed and equipped with weapons for attacking enemy targets. The attack helicopter is often used in military operations to provide close air support for ground troops. Attack helicopters are very fast and agile, making them effective in combat situations where rapid response and maneuverability are necessary. They are armed with a variety of weapons including machine

guns, rockets, and missiles, which can be used to take

out enemy tanks, vehicles, and infantry. The Apache

is one of the most well-known and widely used attack

helicopters in the world, and it has played a critical

role in many conflicts.
