

Self-Propelled Artillery is a type of military vehicle that has a large gun mounted on a vehicle chassis. These vehicles are designed to move quickly on the battlefield while providing heavy firepower to support ground troops. They are often used in combination with other military vehicles to create a powerful fighting force. Self-Propelled Artillery is equipped with advanced technology and can be used to fire different types

of ammunition such as high explosive, armor-piercing,

and smoke rounds. They are essential for providing

support to infantry units and can help turn the tide of

a battle.
